

CHINA
JUSHI

Ultra High Modulus
Carbon Fiber

PRIMARY GLASS

FOR
FIBRE REINFORCED
PLASTIC COMPOSITES

REVOLUTION

A NEW SOLUTION
FOR HIGH

UNIQUE BENEFITS OFFERED BY E9 GLASS FIBER

Higher Modulus

A modulus over 100 GPa – 10% higher than traditional E-glass

10% higher than traditional E-glass

Higher Strength

10% higher than traditional E-glass

10% higher than E7

Higher High Temperature Resistance

Can be used up to 133°C higher than traditional E-glass, and does not react with epoxy resin. 3.1% higher than traditional E-glass

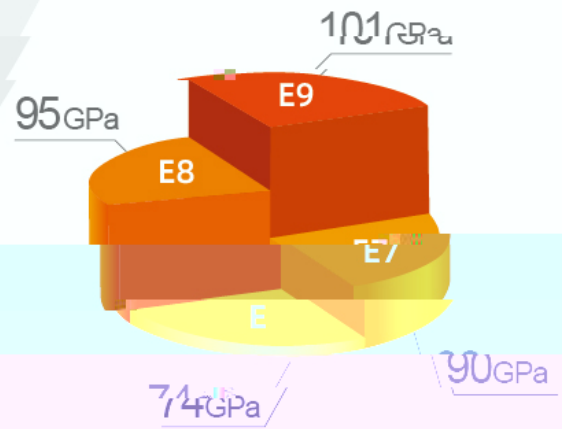

Higher Fatigue Resistance

More than 100% higher than traditional E-glass, to ensure higher reliability of finished products

More Environment-friendly

100% soda ash-free and ammonia-free glass composition to ensure cleaner production

EXCELLENT MECHANICAL AND THERMAL PROPERTIES

ive even better mechanical
materials. It is therefore able to meet

As a new generation class fiber of high modulus and strength, which has excellent properties, such as resistance and impact resistance to composite materials, it is able to meet higher requirements for composite design and use environment.
